

SOLAR BALLAST

PROTECTING
WHAT
MATTERS

PRECAST SOLAR BALLAST

Lindsay's precast ballasts secure solar panel components without ground penetration. Our products are manufactured to meet various solar panel design characteristics, ground conditions, wind speeds and any other criteria necessary to deliver an effective structure.

BENEFITS OF PRECAST BALLASTS

Lindsay Precast can meet the needs for your next solar ballast project with speed and quality. Whether your project calls for 100, 1,000, or 10,000 ballasts - no quantity is too small or too large! Since we have the ability to fabricate our own tooling, we can ramp up for any project size quickly and effectively.

1

LONG-TERM SAVINGS

The sustainable material of concrete can stand up against the harsh weather conditions for a long life cycle.

2

EASE OF INSTALLATION

Being manufactured in advance, our products are installed easily using a crane and a small crew saving days or weeks.

3

AESTHETICS

Who doesn't appreciate the natural, timeless appearance of a precast product.

4

QUALITY

Using precast ensures that your products are manufactured in a controlled environment and produced to NPCA QC requirements.

5

AVAILABILITY

Using prefabricated products minimizes on-site downtime and overall job duration.
